Smart Oil & Gas Operations

Automated and actionable time series AI for reliable operational monitoring
Avoid disruptions *before* they impact production

Timely, understandable alerts
Discover and understand operational anomalies as they occur

Condition-based actions
Diagnose and resolve issues just when needed

Effortless activation & scale
Operationalize and expand with minimal resources, time, and effort

Benefits across Oil & Gas value streams

Operations Monitoring

Problem: Existing rules-based systems do not provide complete visibility of operational integrity to remote monitoring centers

Solution: Establish direct connections to well and production data sources. Automatically receive AI analysis alerts for conditions that may impact operations.

Benefit: Remote monitoring at scale (~ 10^6 signals), proactively act on anomalies and plan downstream actions

Predictive Maintenance

Production loss from unplanned slowdowns or component failures

Get actionable early warning of system degradation and perform rapid root cause analysis for planning corrective actions

Minimize asset downtimes and increase maintenance efficiencies

Emissions Compliance

Failure of flaring assets could lead to toxic gases discharged into atmosphere

Remotely monitor flaring conditions and identify precursors leading to component failures
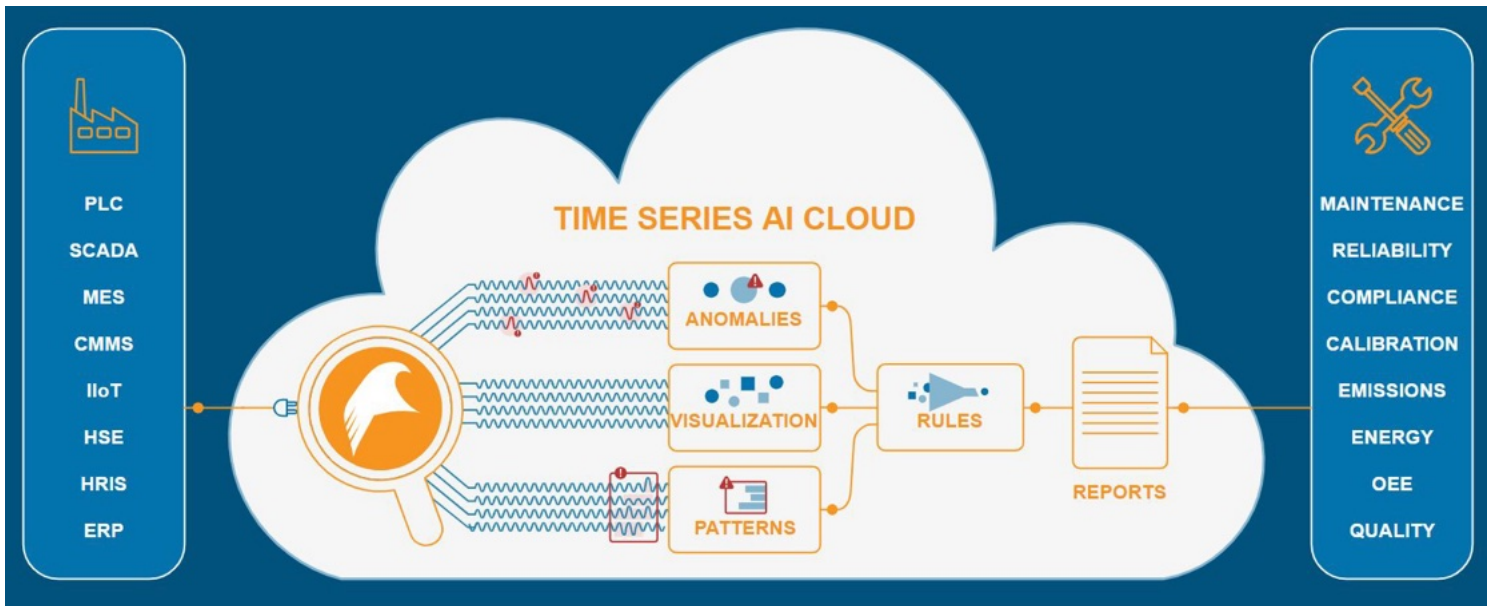

Meet safety regulations, avoid downtime costs

> " *Our LNG fleet operations generate a lot of data and we needed a solution that could scale across multiple use cases and asset types. Falkonry enabled us to optimize maintenance, avoid downtime and expedite repair.*"

> **Offshore Oil and Gas Production Company**

Falkonry Time Series AI Cloud is data-ready, no set up required

Case study: Real-time Equipment Health Monitoring

Compressor fails ⟫ Insufficient warning ⟫ Production loss and delayed recovery

Monitor: 50+ time series signals from **multiple stages** of gas compression
Observe: Discover the onset of compressor degradation **4 months in advance**
Act: Get alerts about increased vibration patterns **9 days prior** to rotor failure

✅ Unattended AI: No setup and manual data analysis effort

✅ Reliable smart alerts build trust in the AI detection

✅ Built for scale: 0 to 10^6 live signal monitoring in less than 2 weeks

✅ Time to value in < 6 months

9 DAYS
ADVANCE ACTIONABLE DETECTION

$300,000
PER INCIDENT **DOWNTIME REDUCTION**
